

Chart Monitor – User Guide

Stock charts & comparison for Android

v2.0.0

1. Getting Started

1. Tap the **Stock 1** search field and enter a ticker symbol or company name (e.g. NVDA or Apple)
2. Select a result from the dropdown list
3. The chart loads automatically with the default time range (1M)

💡 Enter global symbols: Swiss stocks e.g. ABBN . SW, London stocks with . L, etc.

2. Switching Time Ranges

Tap in the range bar: **1D** **1W** **1M** **3M** **6M** **YTD** **1Y** .

For longer ranges: tap **More** ▾ → **2Y** **5Y** **Max** or **Custom** for your own date range.

3. Technical Indicators

Below the range bar (single stock only, from 1M onwards) the indicator chips appear:

- **MA20** **MA50** **MA200** – Moving averages (20/50/200 days)
- **Trend** – Trend line (linear regression)
- **Target** – Analyst consensus price target (loaded automatically in background)

Tap a chip to toggle it on or off. Unavailable indicators (insufficient data points) are greyed out.

💡 MA200 is available even on 1Y and 2Y – the app internally loads 2 years of daily data as warmup.

4. Candlestick Chart

Tap the candlestick icon (top right, next to the range bar) to switch between line and candlestick view. Available from 1W onwards (not on 1D).

5. Comparing Two Stocks

1. Tap the **Stock 2** search field (appears once Stock 1 is loaded)
2. Search and select a second stock
3. The chart shows both prices percentage-normalized (start = 0%)
4. To remove: tap **x** next to the Stock 2 search field

💡 Indicators and candlestick are disabled in comparison mode.

6. Stock Details

Tap the **building icon** next to the bookmark icon on the price card:

- **Company**: sector, industry, country, CEO, employees, market cap, website
- **Valuation**: P/E, EPS, Beta, 52-week high/low, next earnings date
- **Dividends**: dividend per share, yield, ex-date, annual history chart
- **Description**: company text
- **News**: latest headlines (tap to open in browser)

 For ETFs there are additional sections: *Composition* (top holdings) and *Sector Weights*.

7. Watchlist

Add / Remove a stock

Tap the **bookmark icon** on the price card. Filled = in watchlist.

Open watchlist

Tap the bookmark icon in the app bar (top right).

Switch period

Tap the period chip (e.g. **3M**) in the watchlist header to switch the performance period.

Sort

Tap the sort icon in the header: Manual · A–Z · Z–A · Best performance · Worst performance · GICS sector.

Set a price alert

1. Tap the **bell icon** on a watchlist entry
2. Enter a Stop-Loss and/or Target Price
3. Tap **Save** – the app will ask for notification permission (once)

 Alerts fire in the background, even when the app is closed – during market hours (Mon–Fri 13:00–22:30 UTC). Maximum one notification per symbol per hour.

8. FX Calculator

Tap the calculator icon in the app bar:

- **Currency**: live exchange rate conversion
- **Interest**: compound interest calculator

9. Check for Updates

The app automatically checks for new versions on startup. Manually: **Info** → **Check for updates**.

Download: `stock-monitor.ch` or directly via the update dialog in the app.
